

Full Stack Development with MERN

1. Introduction

- **Project Title:** Book Store
- **Team Members:**
 - Thrisha Vejandla – Frontend Developer
 - Shaik Sajida Begum – Backend Developer
 - Pranathi Anumanchipalli– Database Developer
 - Deepika Nakka– API Testing
 - Anjali Kuramana– Documentation

2. Project Overview

- **Purpose:** To develop a Book Store application that allows users to add, view, update, and delete book records.
- **Features:**
 - Add Books
 - View Books
 - Update Books
 - Delete Books

3. Architecture

- **Frontend:** Developed using React.js for building the user interface.
- **Backend:** Developed using Node.js and Express.js to handle API requests.
- **Database:** MongoDB is used to store and manage book information.

4. Setup Instructions

- **Prerequisites:** Node.js, MongoDB, npm, VS Code.
- **Installation:**
 - Clone the project.
 - Install dependencies using `npm install .`
 - Configure the `.env` file.
 - Start the application.

5. Folder Structure

- **Client:** Contains React components, pages, and assets.
- **Server:** Contains routes, models, controllers, and configuration files.

6. Running the Application

- **Frontend:** `npm start` (client directory)
- **Backend:** `npm start` (server directory)

7. API Documentation

- **GET** `/books` – Fetch all books.
- **GET** `/books/:id` – Fetch a book by ID.
- **POST** `/books` – Add a new book.
- **PUT** `/books/:id` – Update a book.
- **DELETE** `/books/:id` – Delete a book.

8. Authentication

- Authentication is not implemented in the current version.

9. User Interface

- Home Page
- Book List
- Add Book
- Edit Book

10. Testing

- Manual testing was performed to verify CRUD operations.

11. Screenshots or Demo

- Include screenshots of the application or provide a demo link.

12. Known Issues

- Authentication is not available.
- Search functionality can be improved.

13. Future Enhancements

- User Authentication
- Search and Filter
- Book Categories
- Responsive Design
